## What It All Comes Down To

I love teaching 143 because students learn a little bit about cool data structures like maps and sets!

## Guinea Pig

```
// Karan graded this homework, and the test scripts all passed! But he
// was too lazy to grade style, so he gave this to you.
```

```
import java.util.*;
import java.io.*;

public class Reverse {
    public static void main(String[] args) {
        Scanner input = new Scanner(System.in);
        System.out.println("Please enter a string.");
        String inputstring = input.nextLine().trim();

        String[] stringelements = inputstring.split("\\s+");
        System.out.println("Your reversed string is: ");
        for (int i = 0; i < stringelements.length; i++) {
            String chargroup = stringelements[i];
            String reversedelement = new StringBuilder(chargroup)
                .reverse().toString();
            System.out.print(reversedelement + " ");
        }
        System.out.println();

        System.out.println("Your original string was: ");
        String notreversed = "";
        for (String word : stringelements) {
            notreversed += word + " ";
        }
        System.out.println(notreversed);
    }
}
```
